

Access Control Worksheet – Zimbabwe Bank

Organization

ABC Commercial Bank in Zimbabwe

Purpose

This worksheet identifies who can access specific systems, data, and resources within the bank. The goal is to protect sensitive financial information and ensure that employees only access the information necessary for their job roles.

Access Control Worksheet

Asset / System	User or Role	Access Level	Reason for Access	Security Control
Customer Banking Database	Bank Managers	Full Access	Manage customer accounts and approve transactions	Multifactor Authentication (MFA) and password policy
Customer Banking Database	Tellers	Limited Access	View and update customer transaction details only	Role-based access control
Financial Records System	Finance Department	Full Access	Manage financial statements and reporting	Encryption and MFA
Financial Records System	General Employees	No Access	Information not required for their duties	Access restrictions
Email System	All Employees	Standard Access	Internal and external communication	Email filtering and strong passwords
Online Banking Platform	Customers	Personal Account Access Only	Perform banking transactions	MFA and encrypted connections

Asset / System	User or Role	Access Level	Reason for Access	Security Control
Backup Database Server	IT Administrators	Full Access	System maintenance and backups	Admin privileges with logging
Backup Database Server	Other Employees	No Access	Sensitive backup data should remain protected	Firewall and access controls
Cash Vault / Safe	Security Officers and Managers	Restricted Physical Access	Protect physical cash and valuables	Keycard and biometric access
Remote Access VPN	Remote Employees	Limited Secure Access	Allow secure remote work connections	VPN encryption and MFA
Marketing Systems	Marketing Team	Limited Access	Promote banking services and campaigns	User account permissions
Human Resources Records	HR Department	Full Access	Manage employee information	Confidential access policy

Access Level Definitions

Access Level	Meaning
Full Access	User can create, modify, delete, and manage data or systems
Limited Access	User can only view or edit information related to their job role
Standard Access	Basic access needed for normal daily tasks
No Access	User is not allowed to access the system or information

Recommended Access Control Measures

1. Role-Based Access Control (RBAC)

Employees should only access systems required for their job responsibilities. This reduces insider threats and accidental data exposure.

Example

- Tellers should not access HR records.
 - Marketing staff should not access financial databases.
-

2. Multifactor Authentication (MFA)

All sensitive systems should require:

- Passwords
- Verification codes or authentication apps

This protects accounts even if passwords are stolen.

3. Strong Password Policies

Employees should:

- Use complex passwords
 - Avoid password sharing
 - Change passwords regularly
-

4. Physical Security Controls

Sensitive physical areas such as cash vaults and server rooms should use:

- Keycards
 - CCTV monitoring
 - Biometric access systems
-

5. Monitoring and Auditing

The bank should regularly:

- Review user access logs
- Remove unused accounts

- Monitor suspicious login activity
-

Conclusion

This access control worksheet helps the ABC bank in Zimbabwe protect sensitive customer and financial information by ensuring employees only have access to the systems necessary for their roles. Implementing strong access controls reduces the risk of cyberattacks, data leaks, fraud, and unauthorized access.
